Who we are

ECCON is an Egyptian general contractor founded in Beni Suef in 1993. We deliver civil, architectural and electromechanical works, infrastructure and landscaping for education, healthcare, public, commercial and sports projects.

Our portfolio includes more than 100 completed and ongoing projects for government entities, universities and private-sector clients. Our work extends from defined construction packages to complete project delivery.

Chairman’s message

The value of a project lives on in the people and communities it serves.

Since ECCON began in Beni Suef in 1993, we have built our relationships on responsibility for the work entrusted to us. Every project carries a commitment to our clients and to the people who will use it.

Our university buildings support learning, our healthcare facilities serve families, and our public spaces contribute to everyday life. These different settings call for the same discipline: understanding the scope, coordinating specialist teams and giving each detail the attention it deserves.

We continue to invest in our engineers and technicians and in the way we plan and execute our work. Our ambition is to grow through projects that demonstrate our capabilities and relationships that endure. I thank our clients, consultants and teams for the trust and effort behind this journey.

Eng. Mohamed Tharwat

Chairman of the Board and Co-Founder

Vision, mission and values

Our vision

To stand among Egypt’s leading contracting companies, recognised for the quality of our work and the capability of our people.

Our mission

To deliver the construction scope entrusted to us with consistent quality and disciplined coordination. We develop our engineers and technicians through continuous training and bring suitable advances in construction technology into practice.

Our values

Quality in execution

Attention to specifications and to the details of the finished work.

Responsibility

Clear commitments and accountability for the work entrusted to us.

Safety

Care for people and the operating conditions of each site.

Partnership

Constructive coordination with clients, consultants and delivery teams.

Continuous development

Training, practical learning and better construction methods.
